Church News . . .

The Woman's Missionary Society of Red Oak Baptis Church will meet at the church on Saturday, March 17, at 10:30, for an all-day meeting. The Week of Prayer will be observed and the Mission Study Class will be taught by Mrs. Lester Harvey.

Memorial Methodist Church

Rev. William E. Reed, Pastor

On Sunday next at 11:00 o'clock A. M., the pastor will preach on, "The Throne of American Life," and at 8:00 P. M. on, "Why You and I Are Here."

The Youth Fellowship Choir will furnish music at the evening service.

Church School at 9:45 A. M., and Youth Fellowship at 7:00 P. M.

Liberty Baptist Church

Rev. H. Frederick Jones, Pastor

Regular preaching services Sunday, conducted by the pastor. The public is cordially invited.

Hebron Baptist Church

Zane Grey Ross, Pastor

You are a stranger here but once.

10:30 A. M. Worship Service. Sermon: "How To Become A Christian."

11:30 A. M. Sunday School.

Some things are like your appendix - you seem to get along as well without it as with it.

Red Oak Baptist Church

Zane Grey Ross, Pastor

Enter to worship, depart to serve

10:30 A. M. Sunday School.

11:30 A. M. Worship Service. Sermon: "How To Become A Christian."

Humanity is made up of three classes: the wishers, the wobblers, and the workers.

Stonewall Presbyterian Church

J. Howard Macrae, Pastor

11:30 A. M. Morning Worship. The text of the sermon will be: "Seek ye first the Kingdom of God, and His righteousness; and all these things shall be added unto you."

Proteins Vary

Not all proteins are of equal value; some are more efficient than others in building and maintaining tissues. In fact, it may take twice as much of certain plant proteins as of some animal proteins to build the same number of cells. In general, animal proteins are higher in value than plant proteins, such as legumes and cereals. Soybeans by far surpass other plant proteins in quantity and quality of protein. Contrary to beliefs held heretofore, it is not harmful to eat more protein than is needed, nor do persons doing hard physical work require extra protein food. The rate of tissue breakdown is not affected by work; therefore hard workers require only extra calories for energy. The extra energy may be supplied by fat or carbohydrates, although protein foods make a high calorie diet more palatable.

Basic Seven

The basic seven food guide suggests that to keep healthy and strong some food from each of its seven groups should be eaten each day. Four of these groups contain vegetables. Group one contains green and yellow vegetables, group two, the raw salad greens and tomatoes, group three the vegetables not named in one and two, and in group five, dried peas and beans are listed along with meats, poultry and fish because of their protein content. The vegetable plate which is so popular for luncheons and suppers is an excellent way of serving a meal from the garden. The vegetables should be selected wisely so that the meal will be attractive, appetizing and appealing to the eye. A bread, a beverage and a fruit salad, or dessert, are all that are necessary to complete a satisfying meal.

Trace Nile's Flood Waters

The Nile has been overflowing its banks and thereby bringing prosperity to the population in its valley since the dawn of history, but the source of these flood waters have been in doubt. It was believed that the heavy rains accompanying the monsoon moving in from the Indian ocean supplied the water. Dr. H. E. Hurst, in a report to the Egyptian government, declares that the flood waters have their origin in the Atlantic ocean as the precipitation in the watershed of the headwaters of the river comes when the winds carrying moisture blow steadily from the west. A relatively small mount of moisture from the Indian ocean gets over the intervening mountains, he reports.

U. S. troops reach Autobahn, super highway east of Rhine.

New Composition Helps Hold Fibers in Place

Although numerous different treatments to make textiles hold their shape and dimensions were developed before the war, the demands of the armed forces have given marked impetus to their actual use, and the postwar future will probably see a much greater use of these processes in civilian fabrics.

When fibers in a fabric are free to slip and turn upon another, they gradually wear each other down. Some fibers also tend to stretch. When they do, they work out of shape and pull open at seams. Antislip processes are designed to overcome these faults by holding fiber structure in place.

A chemical company has offered a rather novel solution to the problem with a dispersion of minute particles of silica (origirally sand) in water. When applied sparingly to a fabric and dried, the water of dispersion leaves upon the surface of fiber an almost imperceptible layer of tiny particles. The resulting nonskid fibers stay in place, distributing the load without stiffening or seriously affecting the "hand" of the goods. If the treatment is applied to bulk fibers, spinning and weaving are improved, although carding is more difficult, since the fibers should be slippery at this stage. In one application, the process is said to make stockings less likely to run.

Eliminate Pet Peeves In Plans for Home

If you are planning to build in the future, a wise thing to do is list your pet peeves,features you would not want included in your house — and reasons for these peeves.

Study your friends houses and your own. Ask questions, learn what other people do who have the same faults in their houses. Find out why they are bother them as much as they do you.

You may discover that some of your pet peeves are not really serious troubles with the plan of the house but are more probably faults in the way you are using your home.

It is especially important that you know the reasons for your peeves so that they can be studied when you actually plan the house. One of the most frequently mentioned peeves is the direct entrance into the living room, and yet some people spend money on an entrance hall and gain no additional privacy because they still have to go through the living room from this entrance hall in order to get to the rest of the house. The reasons for the peeve had not been carefully studied.

Warped Utensils

Frying pans and saucepans, unable to stand steady on the range, may waste heat, cook unevenly, and cause spills and accidents. Since sudden changes in temperature cause metal to warp, avoid pouring cold water in a hot pan or setting an empty pan on a hot stove, or burning food in them. The lighter, thinner kitchenware bends most easily with sudden heating or chilling. The cure recommended for a warped pan is heating and gentle hammering. Slight bulges may often be smoothed out by heating the pan then tapping the bottom with a wooden potato masher or mallet. Never use a metal hammer because its weight may dent or break the pan. Bad bulges may be pounded out between blocks of wood; use two smooth sturdy blocks, one small enough to fit inside the pan. Heat the wood and the pan. Turn the pan upside down over one of the hot blocks and put the other on top. Tap the top block with a hammer until the entire bottom is smooth and even.

Pledge of Allegiance

Originally the pledge to the flag read: "I pledge allegiance to my flag, and to the republic for which it stands, one nation indivisible, with liberty and justice for all." At the National Flag conference in Washington in 1924, it was contended that the pledge could be applied to the flag of any nation, and it was proposed that the pledge be changed to read: "I pledge allegiance to the flag of the United States of America . . ." so that the first real pause should come at the word "America." The former practice of extending the right hand upward from its position over the heart at the word "flag" is probably responsible for the pause at that word, but now, as provided by an act of congress approved December 22, 1942, the hand is held over the heart throughout the pledge.

Uruguayan Farming

Most of the cultivated areas in Uruguay are located along the Uruguay river, in the west, and along the Plata, in the south. Some zones are very fertile, but not as much as the nearby parts of Argentina. This, together with the higher wages that prevail for farm-hands in Uruguay (this is not the case when considering the wages of the peons engaged in the livestock raising "estancias"), makes the cost of growing grain fairly higher than in Argentina. This is especially true in the cases of corn and wheat. The farmers who grow these crops are protected by two groups of laws: (1) tariffs that under normal conditions prevent the import of grain from Argentina and (2) fixed minimum prices for them.

Farm Topics

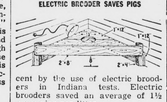
Homemade Electric Pig Brooder of Value

Simple to Construct And Easy to Operate

THE electric pig brooder is fast becoming popular and profitable on farms where pigs are farrowed in late winter or early spring. The brooder prevents chilling and keeps sows from lying on pigs—the common causes of losses.

Death losses of early spring pigs were reduced from 34.3 to 16.9 per

ELECTRIC BROODER SAVES PIGS



cent by the use of electric brooders in Indiana tests. Electric brooders saved an average of 1½ more pigs per litter.

An electric pig brooder is inexpensive and easy to make. On many a farm there are enough pieces of lumber to make one or more brooders. The sketch shows how to make an electric brooder to put in one corner of the farrowing pen.

For the first few days use a 150-watt lamp if the weather is extremely cold. At the end of a week, a 60-watt bulb may supply enough heat. When pigs are 10 days or two weeks old, heat can be discontinued.

It is important to use a rubber-covered shop extension cord complete with rubber-covered socket. Standard brass shell sockets are not suited to this type of use. It is also important to protect the brooder with a plank nailed across the corner, so a nervous sow cannot destroy it.

Spray Cattle to Kill Destructive Grubs

Cattle grubs which are responsible for $100,000,000 annual loss in meat, milk and leather in the U. S., can be controlled by spraying cattle

Power Spray Used.

backs with insecticide under pressure.

When the insecticide is sprayed into the grub holes, the grubs fall out and are killed by the insecticide before they can fall off and reproduce heel flies which in turn attack cattle, laying eggs which turn into grubs.

U. S. Farm Leaders

ARBOR DAY FATHER

J. Sterling Morton, while governor of Nebraska, due to his passion for tree planting, founded Arbor day.

When Cleveland returned to the presidency in 1892, he appointed Morton secretary of agriculture. J. Sterling Morton was born in New York and enjoyed the distinction of having been expelled from the University of Michigan for his independence. He had located in Nebraska City, where he entered politics and became editor of the Nebraska City News.

J. S. Morton

While secretary of agriculture, he reorganized the division of statistics and set up the division of agrostology to study forage plants. He established the division of publications, the office of road inquiry and organized a dairy division.

Arbor day is held in Nebraska on April 22, the birthday of J. Sterling Morton, "the Father of Arbor Day."

DDT Unavailable Now

Although DDT, the new marvel insecticide, has proved effective in preventing damage to fruits, cabbage, potato and other crops, it probably will be released for household and barn use long before it is available for crop spraying.

New experimental work indicates that it is effective when used with certain paints for fly control in barns, houses and other buildings. The available date for general use is uncertain.

Gifts to Red Cross

Mrs. Paul Drinkard has reported the following contributions:

Mrs. W. H. Berlow	$1.00
Mrs. W. A. Mays	$1.00
Mrs. Ita Marks	$1.00

Pruning Orchard

Apples and pears are trained to their natural shape by leaving six to eight main scaffold limbs. Small trees usually do not require any cutting back, while larger ones should be headed at a height of about four feet when set out. The lowest scaffold limb should be about two feet from the ground. Pruning of one and two-year-old trees during the dormant season consists mainly of thinning out the smaller branches and moderately cutting back the larger branches just above an outside branch or bud. Trees of bearing age which have been properly trained to form the desired shape will need only light annual pruning. For the first few years after the trees begin bearing, pruning should consist of a light thinning of the branches, removal of any dead, diseased or crossing branches and a moderate heading back of the larger branches. Older trees will require heavier pruning to stimulate the growth of new fruiting shoots and to maintain a well-balanced tree.

Personals

The Rev. and Mrs. H. Frederick Jones were called to Richmond this week due to the death of his brother, Dr. J. Frasia Jones. Dr. Jones was a well-known physician and former assistant surgeon for the Seaboard Air Line Railway. He died Sunday night in a Richmond hospital.

Mrs. Laura Dunn and Mrs. Gracie Jarrells, Bobby and Sandra Ruth O'Brien were guests of Mr. and Mrs. Dallas Dunn, of Lynchburg Sunday.

Mrs. H. G. Johnson, of Lynchburg spent several days this week in Appomattox.

Mrs. Sam Evans and daughter, Ann, of Lynchburg and Mrs. Jennie Johnson were guests of Mr. and Mrs. Clarence Evans Sunday.

Miss Lucille Cralle, of Charlottesville was here for the week-end.

Miss Catherine Christian, of Richmond was home for the week-end.

Mrs. J. Vance Perkins, Greenville, N. C., and Mrs. Burrell Temple, of Kinston, N. C. spent Tuesday night here with their parents, Mrs. and Mrs. H. F. Jones. Mrs. Morgan Gibson, of Washington is spending this week in the same home.

The regular monthly meeting of the W. M. U. of Liberty Baptist Church will be held ... the church ... Marsh ... e executive board will meet ... 2 P. M. The business meeting will be held at 2:30 and the program at 3:00.

Mrs. J. W. Carter will leave Friday for Miami, Florida, where she will spend ten days.

Mrs. J. A. Conner will spend the week-end in Roxboro, N. C.

Miss Majorie Bingham, of Richmond was home last week-end.

Mrs. Wiley Godsey entertained at her home Sunday March 11 her sisters, Mrs. L.L. Guthrie, of Burlington, N. C., and Mrs. Twyman Wingfield, of Appomattox, with a birthday dinner.Those present were: Mrs. S. E. West, of Clarkton, Va., Mr. and Mrs. W. T. Mayberry, Sonnie, Marshall and Jackie Mayberry, T. A. Mayberry and Miss Edith Woody, of Lynchburg, L. M. Guthrie, Mr. and Mrs. F.E.Guthrie and daughters, Joyce and Clara Mae, of Burlington, N. C., Mr. and Mrs. R. T. Guthrie, Gladys and Leona Guthrie, of Harrisonburg, Va., Mrs. Robert Thomas, Jackie, Mrs.Norbert Reynolds and Miss Dot Smith, of Altavista, Va.

Mrs. Twyman Wingfield i spent Friday and Saturday in Richmond with her husband.

Using Recipes Requires Knowledge of Terms

A good recipe insures a successful baked product only if the one who uses it can interpret the directions correctly. Here are some of the terms common to pastry recipes:

Blend: to mix ingredients thoroughly; **cream:** to manipulate butter with a spoon or beater until it is soft and smooth; **stir:** to mix ingredients with a circular motion to blend them; **beat:** to lift the mixture in a bowl over and over, using a regular, rhythmic motion; **fold in:** to blend ingredients by placing a spoon or spatula down through the mixture, turning it under the mass, and bringing it straight up to make a fold. Ingredients are folded in to prevent the loss of air already introduced into the mixture, and **cut in:** to blend fat with flour by cutting the fat into little pieces with two knives, a fork, or a pastry blender.

Other terms include: **scald:** to heat just below the boiling point. To scald milk, heat it in the top part of a double boiler until it is foamy on top; **batter:** a mixture of flour and liquid that is thin enough to pour; **dough:** a mixture of flour and liquid that is thick enough to knead or roll out.

Rotenone Use

Rotenone is well known to agricultural science, largely through its effectiveness in killing certain garden insects. Later it was found to be effective against several livestock parasites. The latest research shows that less than half as much derris or cube powder is needed to kill sheep ticks as was formerly thought necessary. This point is noteworthy in view of the current shortage of cube powder. Dips made with derris or cube powders are not only easy to prepare, but also save labor, since one dipping is enough. Most other sheep dips commonly used in the past required two applications about 24 days apart. The rotenone in the new dip kills both the adult ticks and the pupae in one dipping, and remains effective in the fleece for several weeks.

Claim German civilians looting.

Economic life of Greece at a standstill.

U. S. crossing of Rhine is now held in force.

GOAD—HUDSON

The wedding of Miss Geneva Mae Hudson, daughter of Mr. and Mrs. Lawrence Hudson, of Spout Spring, and Horace Stephen Goad, son of Mr. and Mrs. T. E. Goad, took place Saturday at 6 P. M. at the home of Mrs. Mary Golladay. Rev. T. E. Goad, father of the groom, read the service.

Arrangements of snapdragons, white rose buds and white carnations with green palm and fern formed the altar. Lighted candles also were used. The bride wore a cocoa-brown suit of garbardine, with brown accessories. At her shoulder she wore a corsage of talisman roses showered with a bridal wreath. Miss Vivian Woodridge, of Lynchburg was maid of honor. She wore an ecqua dress with a corsage of red roses. Harry White, of Lynchburg, served as best man.

After the ceremony a reception was held at the Golladay home, when a wedding cake was cut.Mrs. Golladay assisted in serving the guests. Mr. and Mrs. Goad left after the ceremony for a trip and upon their return will live in Roanoke, where the groom is employed by the John M. Oakley Funeral Home.

Mr. and Mrs. Harold Getz, of Scranton, Pa., announce the marriage of their daughter, Shirley E. to James V. Torrence, A. M. 2-C, U. S. Navy, of Patuxent River, Md.

The ceremony was performed at the Naval Chapel at the U. S. Naval Receiving Station, Anacostia, D. C., by Chaplain C. M. Dreyer, on February 7, at 7:00 P. M.

After a short visit to the home of Mr. and Mrs. J. L. Torrence, parents of the groom, at Appomattox, Va., they returned to Washington, D. C., where they will reside.

Gasoline coupons now valid are A-14, B5, B6, B7, C5, C6 C7, E1, E2, E3, R1, R2, and R3.

History of Sulu Islands Colored by Ade Comedy

War has brought the Sulu Archipelago in the Philippines to serious public notice, but a generation ago it had entertaining recognition in the United States through George Ade's comic opera "The Sultan of Sulu." The sultan was pictured as an amusing semi-savage, a not too accurate idea that showed little regard by Mr. Ade for the fact that the sultan effectively ruled hundreds of islands and part of British North Borneo.

The sultan partly acknowledged the temporal sovereignty of the United States in 1899, and gave complete recognition in 1915. He was the spiritual leader of the Mohammedan Moros, a member of the Philippine senate, an aviation enthusiast and traveled in the United States. From the American governor he annually received about $3,000. He had his own flag, and was royally received by British officials on his visits to North Borneo.

After the death of Sultan Jamalul Kiram II in June, 1936, without heir, his niece and adopted daughter, Princess Hadji, Piandao, transferred in April, 1940, many of the islands to the Commonwealth of the Philippines. Title to the sultanate became a matter of dispute, and stirred conjecture that it also might be tranferred to the Philippine government.

Waterproof Work Shoes To Add to Wear

Waterproofing of work shoes will add an appreciable amount of time to their wear. Application of neatsfoot oil, tallow, wool grease, cod oil, castor oil or a mixture of these can be applied quickly and easily at home. Simply spread the warm grease on the upper part of the shoe with a cloth, and then rub it in thoroughly with the palm of the hand.

To grease leather soles and the seams which join the soles to the uppers, place the shoes in a shallow pan containing enough grease to cover the soles. If the heels are rubber, let them extend over the outer edge of the pan so that the grease will not touch them. Rubber heels and soles should never be oiled because grease softens rubber.

The life of dress shoes as well as work shoes can be prolonged by oiling the soles. Just be careful not to get the oil on the uppers, for most oiled leather can not be polished. Castor oil is one of the few oils that will permit polishing after it has been applied to leather.

Belgians Must Import

In the industrial field the Belgians are greatly dependent on the outside world. They used to have a little iron. At present, what they extract from their own soil scarcely represents 1 per cent of their needs. They used to dispose of some tin; a hundred years ago they produced 70,000 tons, recently less than 1,000 tons. They have a coarse coal, the only natural raw material of which there is a reasonable quantity. Although rich coal mines have been added in this century to the thinner beds which have been in exploitation for ages, even there the position is far from brilliant, since Belgian coal is a brand essentially useful for home consumption and poorly suited for industrial use. In fact, Belgium exported annually about 2,500,000 tons of domestic coal but had to import over 6,000,000 tons of industrial coal. Her industry depended entirely on the imports of coal and ore. Even the fabrication of glass, which amounted to one fourth of world production and was exported up to 95 per cent, could not live if not sustained by foreign import of fuel.

Improve Synthetic

One of the shortcomings of present synthetic rubber tires has been their deterioration at the high temperatures which result from moderately fast speeds. To aid in overcoming this, a rubber reported to show much greater heat resistance than the standard buna or GR-S (Government Rubber - Styrene) synthetic rubber has been developed by replacing the styrene with a styrene-chlorine combination. Among other advantages reported for chlorinated-styrene rubber are greater resistance to tearing and easier processing, although stiffness at low temperatures is said to be more of a problem than with GR-S. The new rubber is expected to cost only a few cents per pound more than GR-S. A moderate-sized government plant for its production is said to be planned.

RATION GUIDE

Process ed Foods. Blue Stamps: X5, Y5, Z5, A2 B2, now valid, expire March 3. C2, D2, E2, F2, G2, now valid, expire April 28. H2, J2, K2, L2, M2, now valid, expire June 2. N2, P2, Q2, R2, S2 now valid, expire June 30.
